

Description

Bollard made in S235J UNI EN 10219-1 steel, hot-galvanized throughout to UNI EN ISO 1461 standards, corresponding in shape, size and ornamentation to the diagrams, which are an integral part of the specifications.

The bollard is composed as follows:

- 1°) A support tube in steel, height 90 cm, with a conical form (lower diam. 8.0 cm, upper diam. 6.0 cm) and in the upper part of two rings (A) for connection to chains.
 - 2°) A steel decorative element with an inclined cut, fixed on the top of the supporting tube (1°). Shapes and sizes are as shown in the diagram.
- The height above ground of the bollard is 99 cm.

Fixing system

The bollard is fitted with a fixing lug that allows it to be removed, composed as follows:

- a) A tube in S235J UNI EN 10219-1 steel (height 21 cm, diam. 4.8 cm), electrolytically cold-galvanized to UNI ISO 2081 standards, to be cemented perfectly vertically into the foundation plinth. The upper part of the lug has an M27 threaded hole at the centre. Beneath the base of the bollard is an M27 stud to be screwed into the steel tube cemented into the foundation plinth.

Protection of surfaces

Please refer to the specification on painting procedures of the materials.
